

Acorn Waterproof Inkjet Film **Waterproof Inkjet Film for Screen Printing**

A fast drying “waterproof type” film that satisfies the needs of the most demanding silkscreen printer, at a surprisingly affordable price.

Its UV densities easily match those of silver films.

Works great with either pigment or dye-based ink

As always, product satisfaction is guaranteed

- ◆ Always use high resolution images for best results.
1440dpi for line images, lower is ok for halftone work
- ◆ Make sure you have the film loaded correctly.
Be sure that the coated side will be face-up under the print head
- ◆ Settings - always use the highest resolution you can.
This will often be determined by how fast you want the film to image.
The higher the resolution the slower the image speed.
- ◆ Ink Density - adjust the amount of ink to ensure maximum density while still drying
- ◆ Drying time - in most cases the ink will be touch dry as the film comes out of the printer
- ◆ Dry Emulsion - Ensure that your emulsion has fully dried before attempting to expose
The image on the film will be damaged if the emulsion is still wet or tacky
- ◆ Film Storage - to re-use the film it is best stored with clean paper between each sheet of film
Store in a dry environment
- ◆ Tech Support - We at DAA International LLC pride ourselves in the Technical Support we provide - Please call : 800-631-0039
