All prices are estimated street prices

(1) One ft² of fully printed area.

(2) Ink + ph (printhead) cost is the result of adding up black ink + black ph cost and color ink + color ph cost.

(3) Number of ft² that can be printed with one set of 8 inks. Small figure ("min") is for the color most used, the first to be replaced.

(4) "Ink + ph price per ml" considers the price of the cartridges (cartridge capacity is 130 ml) and the price of the printheads (estimated printhead life is 2500 ml). Formula used: Ink + ph price / ml = cartridge price / cartridge capacity + printhead price / printhead estimated life.
