All prices are estimated street prices

(1) One m2 of fully printed area.

(2) Ink + ph (printhead) cost is the result of adding up black ink + black ph cost and color ink + color ph cost.

(3) Number of m2 that can be printed with one set of 12 inks. Small figure ("min") is for the color most used, the first to be replaced.

(4) "Ink + ph price per ml" considers the price of the cartridges (cartridge capacity is 130 ml) and the price of the printheads (estimated printhead life is 2500 ml). Formula used: Ink + ph price / ml = cartridge price / cartridge capacity + printhead price / printhead estimated life.
